

GNT Computer Requirements

Operating System

GNT is a Windows desktop application. It only runs on true windows computers. It does not run on Windows RT, iOS (Apple Products), Android or Chrome OS.

*Technically, GNT can be used on an apple laptop but requires that you purchase a windows emulating environment like Parallels or BootCamp, and the purchase a windows license. You could install GNT in that environment. However, experience shows that the complication of the setup is difficult for the user and almost impossible to provide support for. Additionally, the total cost of the software is ~ \$200. An inexpensive Windows laptop can be purchased for \$250. **There is no way to install GNT on an iPad or iPhone.***

Memory

A minimum of 4 gigabytes of RAM is recommended.

Disk Space

Sixty-four gigabytes, or more, of disk space is recommended. An SSD (Solid State Drive) will improve performance. Thirty-two gigabytes will be sufficient at the start, but it is likely that Windows updates will fail to install due to insufficient storage and you will be stuck.

Screen Size

A 15-inch screen size is recommended. If your eyes are good, you can go with a smaller screen size. A high-resolution screen is NOT recommended – it may cause sizing and layout issues.

Form factor

GNT will run on any machine form factor. It is not tablet computer aware and will not work well if you turn on tablet mode. A normal laptop is recommended.

Operating System Version

GNT was developed and tested on Windows 10. It will NOT run on Windows XP. Other versions of Windows may support GNT if they support the .net framework 4.5.2.

Price

A computer with the specs above should be available for around \$250.

Username

When setting up the computer, do not use any special characters in the user name (including apostrophe). GNT will not be able to create pdfs if it does.
